Experience

- 2024–2025 **Web Full-stack**, *Anthology*, Brno.
Developing new features for education accessibility platform & Ally
- 2022–2024 **Product developer**, *Freelance*.
Directly assisting clients with tailored full-stack solutions "from analysis to analytics"
- 2019–2022 **Data Engineer**, *Kiwi.com*, Brno.
Building and maintaining data pipelines, contributing to the formation of a data warehouse, and assisting with analysis and visualization, while ensuring data quality
- 2017–2019 **Web Frontend**, *InQool a.s.*, Brno.
Creating custom web applications for e-shops. Notably, I've worked on & Brno iD

Education

- 2018–2020 **Artificial Intelligence and Data Processing***, *Master's degree*, Faculty of Informatics, Masaryk University.
*Not formally finalized
- 2015–2018 **Computer Systems and Data Processing**, *Bachelor's degree*, Faculty of Informatics, Masaryk University.
- 2010–2015 *Technické lyceum*, Středná priemyselná škola, Bardejov

Masters thesis

- Title *Tool Supporting Analysis of Meteorology Data*
- Supervisor RNDr. Tomáš Rebok, Ph.D.
A newly built system allowing users to process and validate meteorological data while enhancing the analytical capabilities.
- Url & Full text

Bachelors thesis

- Title *Techniques for measuring similarity of educational items*
- Supervisor doc. Mgr. Radek Pelánek, Ph.D.
Using machine learning to measure the similarity of questions in tutoring systems utilizing only the correctness of answers from users.
- Url & Full text, excerpt: & ienze.me/tmsei_thesis

About

Even outside of work, I like to fill my time with a variety of projects, hobbies, and things to learn. I enjoy urbexing and working in nature, hanging out in unusual places, spending my time outside and around other people. Every couple weeks I play boardgames with my friends and hang out.

50+ small personal projects

Skills

User-facing

- JavaScript, TypeScript,
- React, WebGL, Unity,
- CSS and preprocessors,
- CI/CD pipelines.

Business logic

- Python, Java, REST,
- PostgreSQL, MongoDB,
- AI, Machine learning,
- C++, Testing, Kafka.

Operations

- Linux, Kubernetes,
- Grafana, Terraform,
- GCP, AWS, Docker,
- Airflow, Jupyter.

Languages English (*Fluent*), Slovak (*Native*), Czech

Last notable project

2025-2026 **Styloma**, *Fashion search engine and clothing discovery.*

A clothing aggregator providing lookup by reverse image search as well as deeper interpretation of textual descriptions. Consisting of

- Retailer data ingestion,
- Image and semantic embedding,
- Data pipelines,
- Scheduling of scraping,
- Consolidation of competing offers,
- AI model training.

Architecture Being built as a monorepo of TypeScript packages for back-end (micro)services, front-end applications (React PWA, Material UI), and tooling, allowed me to easily ensure type coherence across the whole project from database ORM up to display components themselves.

Agentic Custom local development server supporting agentic development, review, validation and verification, and system operations supported by:

- Multi agent support: Claude Code, Cline, OpenCode,...
- MCP integration allowing agent access to system state, while ensuring,
- Static analysis of code validating extensive custom rule set,
- Followed by unit, integration and end to end testing as part of the environment,
- As well as ops like integration of retailers, data quality evaluations...
