Experience

- 2024–2025 **Web Full-stack**, *Anthology*, Brno.
Developing new features for education accessibility platform [@ Ally](#)
- 2022–2024 **Product developer**, *Freelance*.
Directly assisting clients with tailored full-stack solutions "from analysis to analytics"
- 2019–2022 **Data Engineer**, *Kiwi.com*, Brno.
Building and maintaining data pipelines, contributing to the formation of a data warehouse, and assisting with analysis and visualization, while ensuring data quality
- 2017–2019 **Web Frontend**, *InQool a.s.*, Brno.
Creating custom web applications for e-shops. Notably, I've worked on [@ Brno iD](#)

Education

- 2018–2020 **Artificial Intelligence and Data Processing***, *Master's degree*, Faculty of Informatics, Masaryk University.
*Not formally finalized
- 2015–2018 **Computer Systems and Data Processing**, *Bachelor's degree*, Faculty of Informatics, Masaryk University.
- 2010–2015 *Technické lyceum*, Středná priemyselná škola, Bardejov

Masters thesis

- Title *Tool Supporting Analysis of Meteorology Data*
- Supervisor RNDr. Tomáš Rebok, Ph.D.
A newly built system allowing users to process and validate meteorological data while enhancing the analytical capabilities.
- Url [@ Full text](#)

Bachelors thesis

- Title *Techniques for measuring similarity of educational items*
- Supervisor doc. Mgr. Radek Pelánek, Ph.D.
Using machine learning to measure the similarity of questions in tutoring systems utilizing only the correctness of answers from users.
- Url [@ Full text](#), excerpt: [@ ienze.me/tmsei_thesis](#)

50+ small personal projects

Skills

User-facing

- JavaScript, TypeScript,
- React, Angular, MUI,
- ESLint, Yarn plugins,
- CI/CD pipelines, git.

Business logic

- C#, Java, Python,
- PostgreSQL, MongoDB,
- AI, Machine learning,
- TDD, Static analysis.

Operations

- Linux, Kubernetes, Helm,
- Terraform, Sentry,
- GCP, AWS, Docker,
- GitLab, GitHub, Jenkins.

Languages English (*Fluent*), Slovak (*Native*), Czech

Product improvement

2024–2025 **Ally**, *Education accessibility platform*, Anthology.

- Refactoring Improving a long-lived front-end codebase I did not create, while still shipping features:
- Led the Angular upgrades 12 → 13 → latest compatible version, unifying outdated logic and divergent approaches,
 - Unblocked the removal of legacy AngularJS through a series of large refactors,
 - Cut the front-end build from 15 minutes to 2.

Last notable project

2025–2026 **Styloma**, *Fashion search engine and clothing discovery*.

A clothing aggregator providing lookup by reverse image search as well as deeper interpretation of textual descriptions. Consisting of

- Retailer data ingestion,
- Image and semantic embedding,
- Data pipelines,
- Scheduling of scraping,
- Consolidation of competing offers,
- AI model training.

Architecture Being built as a monorepo of TypeScript packages for back-end (micro)services, front-end applications (React PWA, Material UI), and tooling, allowed me to easily ensure type coherence across the whole project from database ORM up to display components themselves.

- Platform
- Validation: every change passes full static analysis with an extensive custom rule set,
 - Verification: unit, integration and end-to-end tests for complex logic only,
 - Dev environment: local Docker services, custom dev. server building packages and images,
 - Published: [eslint-formatter-actionable](#), [eslint-plugin-defensive-coding](#), [yarn-plugin-prod-lockfiles](#).
